

This dataset of 100 Hindi examples was constructed using a scenario-based approach to capture practical, everyday situations. To reproduce a comparable dataset, generate examples centered around the following thematic categories, ensuring they reflect common actions, problems, or advice within each domain: Food & Cooking, Household Chores, Health & Safety, Festivals & Traditions, Travel & Carrying Items, Technology & Gadgets, Environment & Hygiene, Personal Care, Emergencies & Repairs, and Daily Life Activities. The goal is to create natural-sounding instances that a native speaker would readily encounter or discuss.
